

# It's Better Not To Guess At Some Levels

Penberthy's taken the guess work out of level indication for Tubular Glass Gages.

Tubular Glass Gages have always proven a good choice for level indication in low to medium pressure applications. Not only are Tubular Glass Gages simple and dependable, they also provide an excellent means to visually inspect process fluid characteristics.

Up to now the only problem has been the ability to quickly determine liquid levels within the sight glass. This is especially true if your vessel is completely full or empty.

**WELL NO MORE**, thanks to Penberthy's new Refractive Protector.

Not only does this extruded aluminum protector safeguard your gage, it utilizes the refractive nature of your process fluid to provide unsurpassed level indication. The back of the protector is covered with diagonal red stripes. When your process fluid passes in front of these stripes, their angle changes. The result is a quick and accurate method for reading your gage, even when completely full or empty.

Penberthy's Refractive Protector can be used in conjunction with all standard Penberthy valves that utilize High Pressure glass. It can also be added to existing Tubular Glass Gages currently in service.

For more information on this and other new Tubular Glass Gage accessories such as Glass Unions and Hydraulic Adapters, contact Penberthy or your local authorized Penberthy distributor.
