

PENBERTHY JET PRODUCT LINE UPDATE

The Jet Product Team has been busy working to improve **customer service** and **product offering**. Some of the activities we have been working on are:

- Development and release of the **GST (Gas-operated Solids Transport)** unit, which is designed to pneumatically convey powders and bulk solids through a closed piping system.
- A new and expanded "**Quick Ship**" program. In addition to offering a wider variety of models and sizes, we have added units made from plastic.
- The implementation of a **one-week** delivery program for basic jet models in standard materials (Bronze, Iron and 316 Stainless Steel).
- Addition of **Carbon Steel** material for most standard size jets.
- We have added a **wrench-flat** to standard ½" through 3" jets. This feature will allow the end-user to install a jet pump without having to use a pipe wrench on the body.
- A **new catalog** has been developed providing more application information on where and how Penberthy jets can be used in today's industries. This catalog will be available shortly. Other sales tools and new promotional flyers have also been released.
- We have implemented improved delivery times for standard 6" and 8" size **fabricated jet pumps**. This includes models LL, LM, LH, GL, GH and HLM in carbon steel and 316 stainless steel. We are able to provide these sizes **three** weeks after an order is placed.
- We will be updating our **web site** www.penberthy-online.com to provide more information.
- We have received **3-A certification** and will provide the **3-A symbol** on the following Penberthy jet pumps: Models SLL, SLM, SLH, SGL, SGH, and SHLM in sizes 1", 1 ½", 2" and 3". The certification includes steam injection heating (via eductors) as well as classic pumping/mixing applications. A sanitary Circulating Tank Eductor (CTE) is being developed.
- We have lined jet pumps available for use in erosive or corrosive applications. Lining the unit will increase the service life. Sizes available for Tefzel lined units are ½" through 3" and FluoroElastomer lined units are 1 ¼" through 3". Ceramic nozzle jet pumps are used to prolong useful life in erosive applications. Available in sizes ½"A through 3", the nozzle is lined & the standard body is cast STS.

The "Jet Product Team" has been busy. Our goal is to:

- Improve the level of service we offer to our customers.
- To enhance your opportunities to sell more Jets.
- To provide more effective tools to make it easier for you to sell Jets

The efforts of the Jet Product Team do not stop here. We continue to strive towards bettering the Jet Product line and our service to you and your valuable customers.
